# Representation of molecules

Mixture of metrics optimization for machine learning problems

Magdalena Wiercioch

Fingerprints are binary strings where a given bit indicates the absence or presence of particular pattern.

Goals of this Work

Outline

Motivation

Background

Approach

Experimental results

Conclusion

References

Fingerprints are binary strings where a given bit indicates the absence or presence of particular pattern. Problems:

- high dimensionality

Fingerprints are binary strings where a given bit indicates the absence or presence of particular pattern. Problems:

- high dimensionality
- they are not unique

- $IC_{50}$ ,  $EC_{50}$ ,  $K_d$

- $IC_{50}$ ,  $EC_{50}$ ,  $K_d$
- a binding constant  $K_i$  was used

Goals of this  
Work

Outline

Motivation

Background

Approach

Experimental  
results

Conclusion

References

- $IC_{50}$ ,  $EC_{50}$ ,  $K_d$
- a binding constant  $K_i$  was used
- prediction of molecule's activity is repeated several times

- $IC_{50}$ ,  $EC_{50}$ ,  $K_d$
- a binding constant  $K_i$  was used
- prediction of molecule's activity is repeated several times
- the chemical compound were considered as active if  $K_i \leq 100$  while for  $K_i \geq 1000$  - inactive

Intuitively: design a measure which gives low values for compounds with similar activities while high values are assigned for compounds with different values of  $K_i$ .

Goals of this  
Work

Outline

Motivation

Background

Approach

Experimental  
results

Conclusion
